Project Hub: Linking Pages and External CSS

HTML practical: hub page linked to three pages, styled with an external stylesheet.

Files in this practical

1. `conecting 3 pages and external css.html` - Hub page that links to the other three pages (uses style.css)
2. `style.css` - External stylesheet used by the hub page
3. `list practical (nested) or OL and UL.html` - Nested ordered and unordered lists
4. `table practical (both rowspan and calspan combined).html` - Table using rowspan and colspan together
5. `webpage, image, internal css practical.html` - Webpage with an image and internal CSS

1. conecting 3 pages and external css.html

Hub page that links to the other three pages (uses style.css)

Code

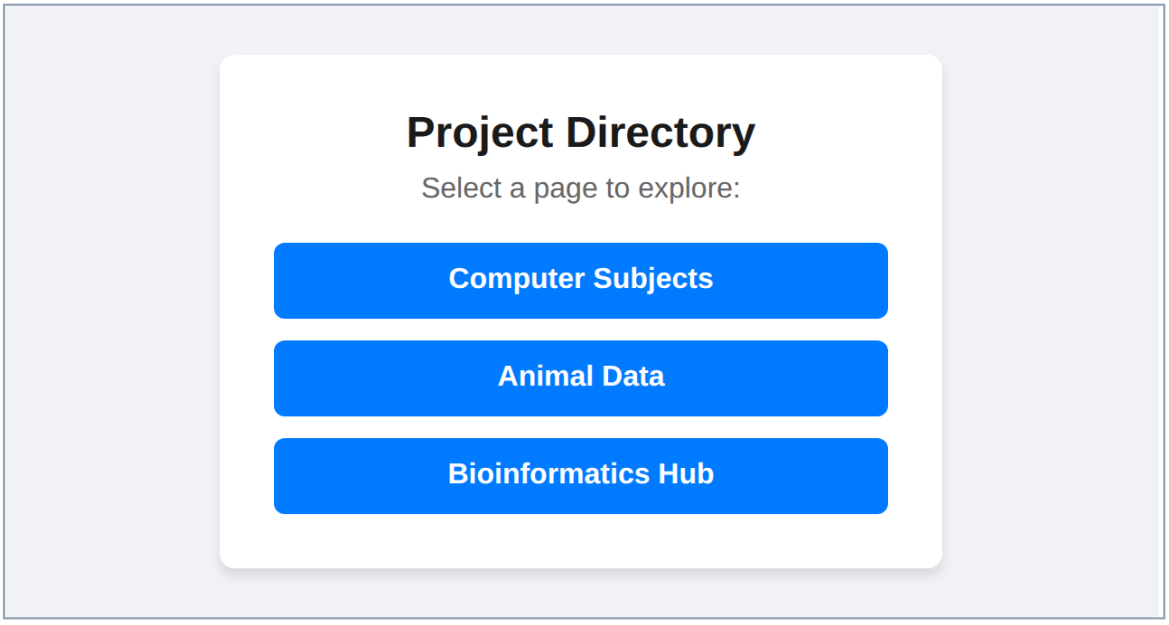

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Project Hub</title>
    <!-- Linking the external CSS file -->
    <link rel="stylesheet" href="style.css">
</head>
<body>

    <div class="hub-container">
        <h1>Project Directory</h1>
        <p>Select a page to explore:</p>

        <nav class="nav-links">
            <a href="list practical (nested) or OL and UL.html" class="btn">Computer Subjects</a>
            <a href="table practical (both rowspan and calspan combined).html" class="btn">Animal Data</
                a>
            <a href="webpage, image, internal css practical.html" class="btn">Bioinformatics Hub</a>
        </nav>
    </div>

</body>
</html>
```

Output

2. style.css

External stylesheet used by the hub page

Code

```
* {
    margin: 0;
    padding: 0;
    box-sizing: border-box;
}

body {
    font-family: Arial, sans-serif;
    background-color: #f0f2f5;
    display: flex;
    justify-content: center;
    align-items: center;
    min-height: 100vh;
}

.hub-container {
    background: #ffffff;
    padding: 30px;
    border-radius: 8px;
    box-shadow: 0 4px 6px rgba(0, 0, 0, 0.1);
    text-align: center;
    max-width: 400px;
    width: 100%;
}

h1 {
    color: #1a1a1a;
    margin-bottom: 8px;
    font-size: 24px;
}

p {
    color: #666;
    margin-bottom: 20px;
}

.nav-links {
    display: flex;
    flex-direction: column;
    gap: 12px;
}

.btn {
    display: block;
    text-decoration: none;
    background-color: #007bff;
    color: white;
    padding: 12px;
    border-radius: 6px;
    font-weight: bold;
    transition: background 0.2s ease-in-out;
}

.btn:hover {
    background-color: #0056b3;
}
```

3. list practical (nested) or OL and UL.html

Nested ordered and unordered lists

Code

```
<!DOCTYPE html>
<html>
<head>
    <title>Nested list example</title>
</head>
<body>
    <h2>Computer subjects</h2>
    <ul>
        <li>Programming
            <ol>
                <li>C</li>
                <li>C++</li>
                <li>Java</li>
            </ol>
        </li>
        <li>Web technology
            <ol>
                <li>CSS</li>
                <li>JavaScript</li>
            </ol>
        </li>
    </ul>
</body>
</html>
```

Output

4. table practical (both rowspan and calspan combined).html

Table using rowspan and colspan together

Code

```
<!DOCTYPE html>
<html>
<head>
    <title>using rowspan and colspan</title>
</head>
<body>
    <table border="2" align="center">
        <tr>
            <th colspan="4">animal information</th>
        </tr>
        <tr>
            <th>category</th>
            <th>Animal</th>
            <th>habitat</th>
            <th>Food</th>
        </tr>
        <tr>
            <td rowspan="2">Carnivorous</td>
            <td>Lion</td>
            <td>forest</td>
            <td>meat</td>
        </tr>
        <tr>
            <td>tiger</td>
            <td>forest</td>
            <td>meat</td>
        </tr>

        <tr>
            <td rowspan="2">Herbivorous</td>
            <td>Elephant</td>
            <td>forest</td>
            <td>grass</td>
        </tr>
        <tr>
            <td>sheep</td>
            <td>forest</td>
            <td>grass</td>
        </tr>
        <tr>
            <td rowspan="2">omnivorous</td>
            <td>bears</td>
            <td>forest</td>
            <td>fruits and fish</td>
        </tr>
        <tr>
            <td>monkeys</td>
            <td>forest</td>
            <td>fruits and insects</td>
        </tr>
    </table>
</body>
</html>
```

Output

animal information			
category	**Animal**	**habitat**	**Food**
Carnivorous	Lion	forest	meat
	tiger	forest	meat
Herbivorous	Elephant	forest	grass
	sheep	forest	grass
omnivorous	bears	forest	fruits and fish
	monkeys	forest	fruits and insects

5. webpage, image, internal css practical.html

Webpage with an image and internal CSS

Code

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Bioinformatics - Coding the Animal Kingdom</title>
    <style>
        body {
            font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
            background-color: #f4f7f6;
            color: #333;
            display: flex;
            flex-direction: column;
            align-items: center;
            justify-content: center;
            min-height: 100vh;
            margin: 0;
            padding: 20px;
        }
        .container {
            background-color: #ffffff;
            padding: 30px;
            border-radius: 12px;
            box-shadow: 0 4px 15px rgba(0, 0, 0, 0.05);
            text-align: center;
            max-width: 500px;
            width: 100%;
        }
        h1 {
            color: #2c3e50;
            margin-bottom: 10px;
            font-size: 24px;
        }
        p {
            color: #7f8c8d;
            font-size: 16px;
            line-height: 1.5;
            margin-bottom: 25px;
        }
        .image-container {
            width: 100%;
            height: 250px;
            border-radius: 8px;
            overflow: hidden;
            background-color: #e0e0e0;
            display: flex;
            align-items: center;
            justify-content: center;
        }
        img {
            width: 100%;
            height: 100%;
            object-fit: cover;
        }
    </style>
</head>
<body>

<div class="container">
    <h1>Bioinformatics & Data Science</h1>
    <p>Using powerful web technologies and programming languages to organize, structure, and analyze com
        plex animal kingdom data.</p>

    <div class="image-container">
